Detail

Penggunaan javascript

```
1 const menuBar = document.querySelector(".menu-bar");
2 const menuNav = document.querySelector(".menu");
3
4 menuBar.addEventListener("click", () => {
5   menuNav.classList.toggle("menu-active");
6 });
7
8 const navBar = document.querySelector(".navbar");
9
10 window.addEventListener("scroll", () => {
11   console.log(window.scrollY);
12   const windowHeight = window.innerHeight;
13   const windowPosition = window.scrollY > 0;
14   navBar.classList.toggle("scrolling-active", windowPosition);
15   menuNav.classList.remove("menu-active");
16 });
17
```

Berikut adalah ringkasan fungsi dari kode JavaScript tersebut:

1. Menu Bar Toggle:

ketika elemen `menu-bar` diklik, menu navigasi `menu` akan ditampilkan atau disembunyikan dengan menambahkan/ menghapus kelas `menu-active`.

2. Scroll Event untuk Navbar:

- Saat halaman digulir, jika posisi scroll lebih dari 0, kelas `scrolling-active` ditambahkan ke elemen `navbar` untuk mengubah tampilannya.
- Jika menu terbuka, kelas `menu-active` akan dihapus untuk menutup menu navigasi.

Jadi, kode ini mengatur interaksi menu dan perubahan tampilan navbar saat menggulir halaman.
